DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, 28-44, and 67-108 drawn to a multiphase motor, classified in class 318, subclass 727.
 - II. Claims 2-27, 45-66, and 109-118 drawn to commutation control circuit, classified in class 318, subclass 439.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the multiphase motor is not directed to a specific type of motor, it could very well be an induction, series, synchronous, stepper, asynchronous, DC brushless, DC brush motor, the subcombination is specifically directed to electronically commutated motors. The subcombination has separate utility such as refrigerators and compressor pumps.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2837

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
